SUMMARY

As a junior web developer with a strong focus on React (Next.js), I have successfully developed and maintained numerous projects. Among them is an ecommerce project with an admin dashboard designed to help clients reach more customers and facilitate quick purchases for customers. Additionally, I built an eLearning website for a teacher, aiding in lesson organization and providing students with enhanced comfort.
I've also undertaken several personal projects, including a football app utilizing an API to display the latest standings and upcoming matches across various leagues. Furthermore, I developed a full authentication application using the latest version of NextAuth. This application allows users to register, log in using their credentials or through Google or GitHub providers, manage passwords if forgotten, enable two-factor authentication, and conduct email verifications.

EXPERIENCE

Front-End Developer | Aug 2022 - Jan 2024

mostaql - Algiers , Algeria .

I developed and maintained an ecommerce project for a client :
- Creating a simple client-side interface allowing customers to directly find the products they seek.
- I built a complete, secure dashboard that permits specific administrators chosen by the owner to post, update, and delete products.
- Throughout the process, I focused on utilizing the latest versions of technology updates.
- I collaborated closely with a backend developer on GitHub to implement the Stripe payment gateway webhook.

I developed and maintained an eLearning platform for a teacher :
- The website catered to both teacher and user modes, with specific credentials for the teacher.
- For students (users), I provided a simple design to facilitate reaching their goals and an easy way to filter courses.
- I ensured the highest quality for all videos, images, and files.
- I contributed to the backend development for payment webhooks.

SKILLS

- Cloud computing
- Agile methodologies
- Website optimisation
- Full-stack development
- Latest NextJS technologies
- Database Manipulation
- API's Manipulation
- Eye catching design
